

REACH - Guidance for industry

DHI is a key consultant in the development of Technical Guidance Documents for the implementation of REACH. Our knowledge of the understanding and practical use of the guidance documents is a central part of the assistance we offer to industry.

REACH Implementation Projects (RIPs)

The European Commission has initiated the development of Technical Guidance Documents that shall support industry in fulfilling their obligations under REACH.

DHI participates in the following projects:

- Technical Guidance Document for preparing the Chemical Safety Report (RIP 3.2)
- Technical Guidance Document for Downstream users (RIP 3.5)
- Technical Guidance Document on fulfilling the requirements for articles (RIP 3.8)

Via these activities, we know better than many of our competitors in the field what is required from industry and what is not. We believe that our clients will benefit by this knowledge.

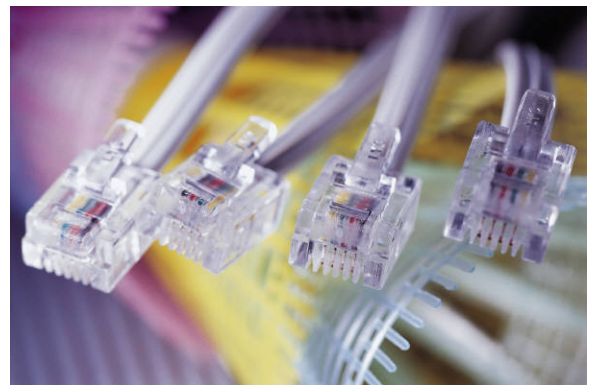

Practical solutions

DHI offers assistance that turns the comprehensive Technical Guidance Documents into practical solutions, tailored to our clients' needs. We frequently

initiate the collaboration by dialogue to define precisely the need for consultancy services.

DHI is currently working with a practical approach in several REACH projects, which are organised by the Danish industrial organisations within following areas:

- Soap and detergent industry
- Chemical industry
- Textile industry
- IT, electronics and telecommunications industry
- Shipping industry

Gate to Europe

Whenever needed, DHI has well-established contacts to competent REACH actors in Europe. DHI has established the 'REACH consultant network' together with Ökopol GmbH (Germany), UMCO (Germany) and Risk & Policy Analysts (UK) to be able to provide complete services within REACH.
